

S4 Fig. A cocktail composed of 5 fmol ascr#3 and 5 fmol ascr#10 is indistinguishable from the control. When the ratio of ascr#3 and ascr#10 was equal, recovery was no better than the control ($P = 0.48$, binomial test). Results described by white columns are from data presented in Fig. 2. See S1 Table for numbers of independent trials and worms tested in each trial.
