

Supplemental Table 1: Estimated coefficient of arsenic exposure in linear models for PHA stimulated T cell proliferation

	All samples	Non-smoking women	Non-smoking men	Smoking men
Exposure^a	B	B	B	B
Urinary As	0.004	0.063	-0.131	-0.033
Inorganic As	-0.006	-0.096	0.021	-0.029
MMA	0.021	-0.087	0.075	-0.024
DMA	0.0004	-0.165	0.083	-0.051

^a Linear regression models were run separately for different arsenic exposure measures (log transformed) adjusted for age and BMI.
