

**S2 Table: Estimated coefficient of arsenic exposure in linear models for non-stimulated T cell proliferation**

	<b>All samples</b>	<b>Non-smoking women</b>	<b>Non-smoking Men</b>	<b>Smoking Men</b>
<b>Exposure<sup>a</sup></b>	<b>B</b>	<b>B</b>	<b>B</b>	<b>B</b>
Urinary As	0.014	0.038	-0.012	-0.018
Inorganic As	-0.001	0.018	-0.002	-0.048
MMA	0.018	0.036	0.002	-0.016
DMA	-0.001	0.025	-0.015	-0.041

<sup>a</sup> Linear regression models were run separately for different arsenic exposure measures (log transformed) adjusted for age and BMI.
