Habitat preference of an herbivore shapes the habitat distribution of its host plant

Nicolas M. Alexandre, Parris T. Humphrey, Andrew D. Gloss, Jimmy Lee, Joseph Frazier, Henry A. Affeldt III, and Noah K. Whiteman.

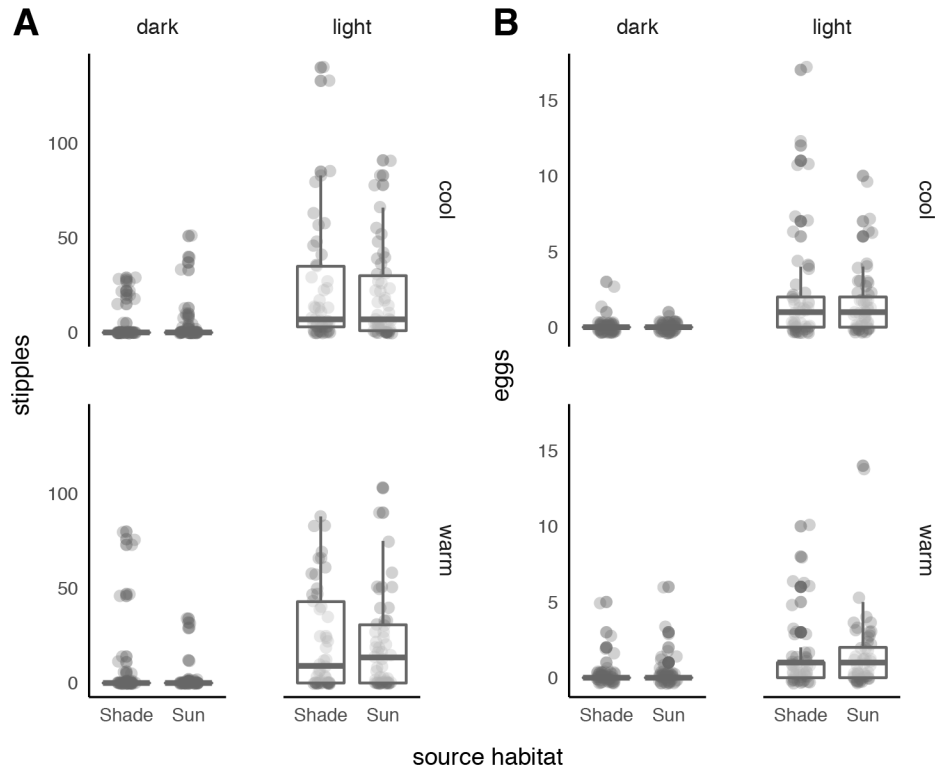

Distribution of stipples and eggs on sun- and shade-source plants in the abiotic habitat choice trials

Fig. S1. Sun and shade-source plants received indistinguishable amounts of stipples (A) and eggs (B) across light and temperature treatments in the abiotic habitat choice trial with adult female *S. nigrita* flies.
