IGO Data Integration for International Status Analysis

Status Researcher

2025-04-10

Introduction

This document integrates International Governmental Organization (IGO) membership data with our existing dataset on state material capabilities, and regime characteristics. IGO memberships represent an important dimension of status in international relations, particularly for the "status through recognition" conceptualization and measuring institutional integration in the international community.

Loading and Preparing IGO Data

```
# Load the IGO membership data
igo_data <- read.csv('/Users/tylerpollard/Desktop/GA thesis data creation/2021314-2014-Updated-IGO-Publication-Data.csv')

# Examine data dimensions
cat('IGO dataset dimensions', dim(igo_data)[1], "rows, ", dim(igo_data)[2], "columns\n")
```

```
## IGO dataset dimensions: 15537 rows, 127 columns
```

```
cat('Year range:', min(igo_data$year), "to", max(igo_data$year), "\n")
```

```
## Year range: 2014 to 2014
```

```
cat('Number of countries', length(unique(igo_data$ccode)), "\n")
```

```
## Number of countries: 217
```

```
# Examine some sample data
head(igo_data, 1:10)
```

```
